1. Title and document control

DC-01 — Document identity and authority

Field	Value
Route	upstream-llama-cpp
Campaign	wb-01-v1.4-2026-07-16
Controlled source	WB-01 v1.4
Pinned upstream commit	2d973636e292ee6f75fadcf08d29cb33511f509f
Canonical report	workbook/source/upstream-llama-cpp-final-report.md

WB-01 v1.4, its controlled evidence index, and the indexed upstream log tree are the authority. Later empty register fields and a README-only raw-results folder are not observations.

2. Technical summary

All 13 intended project workloads completed. The result is a conditional pass because the broader SYCL repository suite retained three edge-case failures even though UL-13 project inference passed.

AC-01 — Attempt status summary

Status	Count
Passed	13

Note: Historical missing values are displayed as Not collected; they are never converted to zero.

3. Key findings and decision-relevant evidence

Recommendation labels are deliberately narrow and describe only this observed campaign.

KF-01 — Bounded decision labels

Role	Test ID	Boundary
best observed CPU	UL-08	UL-08 only; observed campaign label
best observed Intel GPU	UL-10	UL-10 only; observed campaign label
recorded fallback	UL-05	UL-05 only; recorded fallback label

These labels do not establish causal or universal superiority.

4. Repository, branch, commit, build, hardware, and software identity

Identity values below are retained from WB-01 rather than inferred from the reviewing machine.

5. Objectives, scope, test matrix, and execution sequence

The intended sequence moved from CPU precision/cache baselines through Vulkan partial/full offload and finally the SYCL project workload.

MX-01 — Intended matrix

6. Model, weight, cache-format, and backend availability

Availability is represented by the 13 completed matrix rows. No raw-results observations or absent model combinations were invented.

8. Performance results and repetition detail

All included source observations are expanded. Prompt/decode samples come from llama-bench (three per row, except five for UL-13); TTFT and process-tree memory come from three llama-server samples per row. The two series are not falsely represented as one synchronized run.

9. Quality methodology and results

Quality preserves the original 2026-07-15 upstream llama.cpp adjudication under the tracked GTQ-QUALITY-RUBRIC-v1 and frozen GTQ-PROMPTS-v1 contracts: five weighted dimensions, deterministic gates, anchors, strict format caps, and other critical caps. P1-P4 were scored for all rows; UL-05 additionally used P5 long-context retrieval and P6 multi-turn stability.

QM-01 — Original quality method

Item	Value
Rubric	GTQ-QUALITY-RUBRIC-v1
Prompt set	GTQ-PROMPTS-v1
Dimension weights	30% correctness; 25% instruction/format; 20% completeness; 15% relevance/coherence; 10% stability/integrity
Scoring	Conservative manual adjudication after deterministic gates; critical caps preserved
Generation	temperature 0.0; top_p 1.0; seed 42; max_output_tokens 256
Coverage	P1-P4 all rows; P5-P6 UL-05 only
Calibration	Not collected
Score increments	Not collected

QS-01 — Original quality results

Test ID	Prompt count	Mean /10	Rubric
UL-01	4	4.000	GTQ-QUALITY-RUBRIC-v1
UL-02	4	8.875	GTQ-QUALITY-RUBRIC-v1
UL-03	4	8.875	GTQ-QUALITY-RUBRIC-v1
UL-04	4	7.125	GTQ-QUALITY-RUBRIC-v1
UL-05	6	5.750	GTQ-QUALITY-RUBRIC-v1
UL-06	4	6.625	GTQ-QUALITY-RUBRIC-v1
UL-07	4	6.500	GTQ-QUALITY-RUBRIC-v1
UL-08	4	6.875	GTQ-QUALITY-RUBRIC-v1
UL-09	4	7.250	GTQ-QUALITY-RUBRIC-v1
UL-10	4	7.250	GTQ-QUALITY-RUBRIC-v1
UL-11	4	6.750	GTQ-QUALITY-RUBRIC-v1
UL-12	4	6.750	GTQ-QUALITY-RUBRIC-v1
UL-13	4	6.750	GTQ-QUALITY-RUBRIC-v1

Note: These historical scores are not directly comparable with OpenVINO objective-quality scores or later llama.cpp campaigns unless a separate comparability assessment confirms compatible prompts, rubric, denominator, and adjudication.

10. Device/backend use and fallback verification

CPU rows used CPU placement; Vulkan rows recorded one-layer or full-layer placement; UL-13 used full reported SYCL placement. Fallback language is limited to the recorded evidence.

12. Limitations, uncertainty, robustness checks, and claim boundaries

This is one laptop, one pinned upstream revision, and one historical prompt method. Repetition counts support observed medians, not population confidence intervals.

The current Test-Run and Performance registers each contain zero exact UL-01 through UL-13 rows. Indexed log evidence is therefore the repetition authority. UL-13 WB formal throughput and UL-05 displayed aggregate quality diverge from arithmetic source values; both are retained in the scoped deviation ledger with explicit precedence. The raw-results folder is a README placeholder only.

Note: No result establishes healthcare safety, educational efficacy, universal model quality, or causal superiority.

13. Reproduction guidance

Regeneration normalizes existing evidence and does not rerun inference. Use the repository-relative inputs listed in reproduction/README.md.
