

AtomicBot TurboQuant Final Test Report

Document control	Value
Route ID	atomicbot-turboquant
Revision	R1
Generated date	2026-07-17
Evidence IDs	atomicbot-controlled-workbook-markdown-a222b42f344b6376, atomicbot-evidence-index-1bf6d02f2d931a4b, atomicbot-failure-log-edd597640bd970c5, atomicbot-performance-register-2c104a7f446f7360, atomicbot-quality-summary-c7333ff5faf191f9, atomicbot-test-run-register-0d0e0a9272639e1c

1. Title and document control

AtomicBot TurboQuant llama.cpp; WB-02 v1.7; unified publication revision R1. Markdown is canonical.

2. Technical summary

All 19 controlled runtime configurations passed. One repository test remained blocked by Windows Device Guard; that setup block is not a runtime failure. Evidence establishes runtime activation, memory reduction, and observed device placement, with explicit limitations.

3. Key findings and decision-relevant evidence

TurboQuant reduced measured KV allocation in matched cases. Quality was response- and backend-dependent and does not support a precision-ordered or unconditional recommendation.

KF-01 — Decision-relevant result summary

Test	Decode tok/s	TTFT ms	Peak WS MiB	CPU mean %	GPU mean %	Quality /10
AB-01	37.500	72.314	926.988	64.51	0.00	6.225

4. Repository, branch, commit, build, hardware, and software identity

Repository <https://github.com/AtomicBot-ai/atomic-llama-cpp-turboquant>; detached commit 519f0c594a8e31467d2e2f2cf17054c9e7e11536. Portable hardware and software identities are preserved in system JSON without machine-local paths. Historically uncollected fields are `Not collected`.

5. Objectives, scope, test matrix, and execution sequence

WB-02 v1.7 controls the exact 19-row ladder. The publication normalizes existing evidence and does not rerun inference. The workbook's Quality /10 and Status cells were overwritten by duplicate CPU/GPU triples in all 19 result rows; every duplicate pair is reconciled to the exact current performance aggregate before those cells are excluded. Runtime status comes from the Test-Run register, performance/utilization from the Performance register and current summaries, and quality from independently authenticated quality authorities.

SC-01 — Controlled runtime matrix

7. Complete attempt accounting

AC-01 — Complete runtime attempt accounting

Test	Attempt	Status	Reason
AB-01	AB-01--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-02	AB-02--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-03	AB-03--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-KV3-F16-4K	AB-KV3-F16-4K--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-04	AB-04--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-05	AB-05--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-06	AB-06--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-07	AB-07--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-08F	AB-08F--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-KV8-F16-4K	AB-KV8-F16-4K--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-08Q	AB-08Q--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-09	AB-09--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-10	AB-10--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-11	AB-11--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-12	AB-12--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-13	AB-13--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-14	AB-14--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-15	AB-15--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-15M	AB-15M--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.

Note: Runtime: 19 Passed, 0 Blocked. Setup: one Device Guard block/partial and one unsupported TurboQuant-specific SYCL item are reported separately.

8. Performance results and repetition detail

TTFT, peak working set, KV allocation, and utilization reconcile 57 registered observations to their live measurement JSON; raw utilization CSV supports utilization only. Decode throughput is represented separately by 19 formal measurements: 17 formal summaries and three generation-eval events for each of two controlled safety-bypass rows. No utilization artifact is cited for throughput.

PF-01 — Validated aggregate performance

Test	Decode tok/s	TTFT ms	Peak WS MiB	CPU mean %	GPU mean %	Quality /10

9. Quality methodology and results

Each of 114 outputs is bound by SHA-256 to GTQ-PROMPTS-v1, GTQ-QUALITY-RUBRIC-v1, a content-keyed adjudication, a Quality-Evaluation register row, and its per-test summary. The summary, adjudication, and register authorities are independently pinned, so coordinated internally consistent edits cannot redefine published quality. Scores are recomputed from weighted dimensions (30/25/20/15/10) and the smallest applicable critical cap; all 19 means are recomputed. The application remains limited/provisional, calibration is Not collected, and results are not directly comparable with OpenVINO.

QL-01 — Preserved historical prompt means

Test	Mean /10	Method boundary
AB-01	6.225	Limited/provisional; no OpenVINO ranking
AB-02	5.392	Limited/provisional; no OpenVINO ranking
AB-03	6.392	Limited/provisional; no OpenVINO ranking
AB-KV3-F16-4K	6.392	Limited/provisional; no OpenVINO ranking
AB-04	6.725	Limited/provisional; no OpenVINO ranking
AB-05	6.842	Limited/provisional; no OpenVINO ranking
AB-06	5.950	Limited/provisional; no OpenVINO ranking
AB-07	0.700	Limited/provisional; no OpenVINO ranking
AB-08F	5.692	Limited/provisional; no OpenVINO ranking
AB-KV8-F16-4K	5.692	Limited/provisional; no OpenVINO ranking
AB-08Q	6.692	Limited/provisional; no OpenVINO ranking
AB-09	5.967	Limited/provisional; no OpenVINO ranking
AB-10	6.675	Limited/provisional; no OpenVINO ranking
AB-11	6.725	Limited/provisional; no OpenVINO ranking
AB-12	6.225	Limited/provisional; no OpenVINO ranking
AB-13	7.225	Limited/provisional; no OpenVINO ranking
AB-14	8.358	Limited/provisional; no OpenVINO ranking
AB-15	7.508	Limited/provisional; no OpenVINO ranking
AB-15M	6.675	Limited/provisional; no OpenVINO ranking

10. Device/backend use and fallback verification

CPU, Vulkan-hybrid, and Vulkan-native placement were observed. Partial Vulkan rows intentionally retained CPU KV; this is not silent fallback. Exact per-run CPU/GPU observations are preserved.

11. Failures, blocks, deviations, and recovery attempts

Five nonterminal deviations are explicit and typed: two setup scopes, one test scope, one multi-test scope, and one mixed prompt/test scope. Device Guard blocked one repository executable; memory and safety gates were resolved by controlled retest; the P5 timeout remains preserved as a scored empty output. None is converted into a runtime failure or silently filtered.

12. Limitations, uncertainty, robustness checks, and claim boundaries

The historical Evidence Index audit is exact: 828 AtomicBot rows, 38 missing paths, 263 existing-path hash mismatches, and one Evidence_ID duplicated over five empty stdout paths (four extra rows). Only 57 exact indexed utilization tuples substantiate registered utilization; live measurement JSON and formal throughput sources are admitted under their current path/hash. Quality remains provisional, P1-P6 is not a general benchmark, and no direct OpenVINO score comparison is permitted.

Note: Missing historical fields remain `Not collected`, never zero.

13. Reproduction guidance

Use reproduction/commands.md to regenerate normalized artifacts, render DOCX, export PDF through the owned Word process, finalize receipts, and rerun focused validation. It does not rerun benchmarks.

14. Evidence index and hashes

Each admitted source has a repository-relative path and SHA-256. Every material performance, quality, runtime, deviation, workbook-precedence, and stale-index claim is mapped in `evidence/claim-evidence-map.csv`. Stale unjoined index rows are a recorded source-control limitation.

15. Revision history

R1 (2026-07-17): initial unified evidence-bound publication from WB-02 v1.7. R1 hardening receipt: independently pinned quality authorities, full score recomputation, separated performance provenance, exact workbook-duplicate value reconciliation, explicit deviation relationships, exact stale-index inventory, and portable outputs. Generated DOCX/PDF are derivatives.
