

AtomicBot TurboQuant Final Test Report

Document control	Value
Route ID	atomicbot-turboquant
Revision	R1
Generated date	2026-07-17
Evidence IDs	atomicbot-0d0e0a9272639e1c, atomicbot-1bf6d02f2d931a4b, atomicbot-2c104a7f446f7360, atomicbot-a222b42f344b6376, atomicbot-c7333ff5faf191f9, atomicbot-edd597640bd970c5

1. Title and document control

AtomicBot TurboQuant llama.cpp; WB-02 v1.7; unified publication revision R1. Markdown is canonical.

2. Technical summary

All 19 controlled runtime configurations passed. One repository test remained blocked by Windows Device Guard; that setup block is not a runtime failure. Evidence establishes runtime activation, memory reduction, and observed device placement, with explicit limitations.

3. Key findings and decision-relevant evidence

TurboQuant reduced measured KV allocation in matched cases. Quality was response- and backend-dependent and does not support a precision-ordered or unconditional recommendation.

KF-01 — Decision-relevant result summary

Test	Decode tok/s	TTFT ms	Peak WS MiB	CPU mean %	GPU mean %	Quality /10

4. Repository, branch, commit, build, hardware, and software identity

Repository <https://github.com/AtomicBot-ai/atomic-llama-cpp-turboquant>; detached commit 519f0c594a8e31467d2e2f2cf17054c9e7e11536. Hardware and software identities are preserved in system JSON. Historically uncollected fields are `Not collected`.

5. Objectives, scope, test matrix, and execution sequence

WB-02 v1.7 controls the exact 19-row ladder. The publication normalizes existing evidence and does not rerun inference.

SC-01 — Controlled runtime matrix

7. Complete attempt accounting

AC-01 — Complete runtime attempt accounting

Test	Attempt	Status	Reason
AB-01	AB-01--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-02	AB-02--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-03	AB-03--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-KV3-F16-4K	AB-KV3-F16-4K--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-04	AB-04--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-05	AB-05--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-06	AB-06--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-07	AB-07--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-08F	AB-08F--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-KV8-F16-4K	AB-KV8-F16-4K--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-08Q	AB-08Q--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-09	AB-09--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-10	AB-10--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-11	AB-11--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-12	AB-12--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-13	AB-13--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-14	AB-14--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-15	AB-15--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.
AB-15M	AB-15M--attempt-001	Passed	Pilot, excluded warm-up and three measured repetitions passed.

Note: Runtime: 19 Passed, 0 Blocked. Setup: one Device Guard block/partial and one unsupported TurboQuant-specific SYCL item are reported separately.

8. Performance results and repetition detail

Performance and utilization derive from exactly three validated registered repetitions per configuration. Utilization remains attached to each run in the canonical validation metadata.

PF-01 — Validated aggregate performance

Test	Decode tok/s	TTFT ms	Peak WS MiB	CPU mean %	GPU mean %	Quality /10
AB-01	37.500	72.314	926.988	64.51	0.00	6.225

9. Quality methodology and results

Quality is a limited/provisional six-prompt historical regression screen. It is not directly comparable with OpenVINO: prompts, calibration, adjudication, and campaign conditions differ. Calibration: Not collected.

QL-01 — Preserved historical prompt means

Test	Mean / 10	Method boundary
AB-01	6.225	Limited/provisional; no OpenVINO ranking
AB-02	5.392	Limited/provisional; no OpenVINO ranking
AB-03	6.392	Limited/provisional; no OpenVINO ranking
AB-KV3-F16-4K	6.392	Limited/provisional; no OpenVINO ranking
AB-04	6.725	Limited/provisional; no OpenVINO ranking
AB-05	6.842	Limited/provisional; no OpenVINO ranking
AB-06	5.950	Limited/provisional; no OpenVINO ranking
AB-07	0.700	Limited/provisional; no OpenVINO ranking
AB-08F	5.692	Limited/provisional; no OpenVINO ranking

AB-12	6.225	Limited/provisional; no OpenVINO ranking
AB-13	7.225	Limited/provisional; no OpenVINO ranking
AB-14	8.358	Limited/provisional; no OpenVINO ranking
AB-15	7.508	Limited/provisional; no OpenVINO ranking
AB-15M	6.675	Limited/provisional; no OpenVINO ranking

10. Device/backend use and fallback verification

CPU, Vulkan-hybrid, and Vulkan-native placement were observed. Partial Vulkan rows intentionally retained CPU KV; this is not silent fallback. Exact per-run CPU/GPU observations are preserved.

11. Failures, blocks, deviations, and recovery attempts

Device Guard blocked one repository executable. Historical memory gates and quality timeouts/safety blocks remain visible as scoped nonterminal deviations and were not converted into runtime failures.

12. Limitations, uncertainty, robustness checks, and claim boundaries

The historical Evidence Index includes superseded quality-tree rows; only exact joined current measurement tuples substantiate canonical measurements. Quality is provisional, P1-P6 is not a general benchmark, and no direct OpenVINO score comparison is permitted.

Note: Missing historical fields remain `Not collected`, never zero.

13. Reproduction guidance

Use reproduction/commands.md to regenerate normalized artifacts, render DOCX, export PDF through the owned Word process, finalize receipts, and rerun focused validation. It does not rerun benchmarks.

14. Evidence index and hashes

Each admitted source has a repository-relative path and SHA-256. Stale unjoined index rows are a recorded source-control limitation.

EV-01 — Admitted evidence
